DETAILED ACTION

Response to Arguments

1. Last Office Action is hereby incorporated by reference.
2. Applicant's arguments filed 4/27/06 have been fully considered but they are not persuasive.

Re Claims 1, 10, 13, 15, Applicant argues that Randic (U.S. Patent Number 6,275,797) fails to teach, "answering a test call...by playing a voice file".

Examiner disagrees.

Re Claims 1, 10, 13, 15, fig. 1 teaches computer 1 transmitting a voice test file, embedded/encapsulated in packets, to Computer 2 to be tested. When Computer 2 receives the voice test file, this is "answering a test call". The claims limitation does not limit how "a test call" must be answered. As long as Computer 2 can receive the test file for quality determination, it is enabling "to answer a test call". Furthermore, once the test file is received, Computer 2 processes the "voice test file". This is equivalent to "playing a voice file". Again, the claims limitation does not limit how "a voice file" must be played. As claim limitations must be given broadest, reasonable interpretation in light of specification. Limitations appearing in the specification but not recited in the claim are not read into the claim, *In re Morris*, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Hence, "answering a test call...by playing a voice file" is anticipated by Randic.

Re Claims 8, 10, 14, Applicant argues that, "using the test probe that placed the test call to measure the voice call listening quality" is not found in Randic.

Examiner disagrees.

The "Voice test file" is the "a test probe to place the test call". Applicant has failed to distinguish the difference between the "voice test file" and "a test probe to place the test call". As long as, the "voice test file" is used to initiate voice quality determination, it is functionally equivalent, wherein once the voice quality factor is determined using the "voice test file", the "voice call listening quality" is determined. (See MPEP 2184).

Re Claims 3-5, Applicant argues that "PAMS and PSQM are based on a perceptual model that takes into perceptually important to a human listener" and incompatible with AVR of Randic.

However, Examiner disagrees.

Randic also teaches that the "voice test file" can also be a voice input directly by an operator to subscriber 33 and 34 through a microphone (See col. 4, lines 11-20). Since, the voice input can be a voice of the subscriber directly, it is compatible with the PAMS and PSQM for combining and does not teach away from combination.
